

## Possible projects for 2024

- **Cueva Vallina** ([0733](#)) - Diving both upstream Rio Tinto and main downstream sumps. Aven climbing and pushing above end of Glitter Run
- **South Vega** - Torca del Muérdago ([2081](#)) water tracing, Torca del Dron ([4669](#)), Twin Stream Dig ([1390](#)), Cueva Volcano ([1391](#)) technical dig at bottom, Cueva-Cubío de la Reñada ([0048](#)) – resurvey work.
- **Seldesuto** - Fossil Route in Torca de Corcada ([0780](#)), dig ([1298](#)) very strongly draughting technical dig – a key prospect, shaft 5324 10m+ UD shaft.
- **Cubija** - strongly draughting dig ([0813](#)) – advantage as by road parking spot! [5402](#) Spit suggests it has been dropped but we have no record of this. The shaft is ready to be descended to check for leads. [5403](#) Crawl to where stones bounce down a slope for one or two seconds. It requires some widening or a small person to progress.
- **La Secada** - Torca la Decepción ([0252/4732](#)) push and survey incl NE end of Rocky Horror, Cueva de Carcavuezo ([0081](#)) link to Volvo, digging at sites including: Socks ([1017](#)), Cueva Superfosfato ([0200](#)), dig ([5045](#)), cave [1488](#).
- **Fresnedo** - dig ([2522](#)) should link into Cueva del Torno ([2366](#)) – DCC project
- **Riaño** - Fridge Door Cave ([1800](#)) dig to link to Cueva de la Espada ([0103](#)), push beyond sump 8 in Boob Tube ([5000](#)) if the fill in the sump can be dealt with.
- **Hornedo** - dig [5350](#) 5m to draughting 7m + drop needing opening up.
- **Cobadal** - Sumidero de Cobadal ([1930](#)) push up strongly draughting boulder choke above end
- **San Antonio** - Fuente Aguanaz ([0713](#)) end of main stream choke, end sump Río Santa Juliana resurgence ([3282](#)) digging just under water to allow diving access,
- **Solórzano** - Cueva de Lolo ([3991](#)). Push past sump/duck in dry weather
- **Quebraduras** – [5411](#) complete exploration work started at Easter 2024
- **Beranga** – resurgence [4937](#) – entrance with tree stump in it, is above small waterfall that looks like the entrance – dig out below trunk to gain access and then push and survey
- **El Rincón** - resurgence ([4867](#)) – possible dive site
- **Villanueva** - Fuente de Villanueva ([5023](#)), diving prospect

- **Alisas** – Shaft [2052](#) – key site. With an agreement with club G.E. Pistruellos. The shaft was found to be shorter than originally stated at Easter 2024 with about 25m to a tight section and then an estimated 15m drop below. The tight section was too small to safely push through, so it needs more work to progress or a very thin person.
- **Moncobe** - (in agreement with the club G.E. Pistruellos.) - El Cubillón ([2538](#))
