

**site 575: Cueva Riaño Resurgence**  
 Riaño ETRS89: 30T 451207 4900676 Altitude: 110m  
 Length: 485m (included in the Four Valleys System length) Depth: 14m  
 Grid reference is slot down behind resurgence. Water surface at approximately 108m.  
 Surveyed: August 2012  
 Dan Hbberts with John Taylor (tagged line and dive compass)  
 Surveyed: April & July 2016  
 Jim Lister (tagged line and dive compass)  
 Drawn in Inkscape: Juan Corrin  
 Malierzo Caves Project 2012, 2016

**NOTES**  
 Although there is no doubt that the upstream sump joins with downstream Cueva Riaño at the ends of each survey, the centre line surveys have a considerable overlap. The 4 Valleys System area line survey shows this. There has been no attempt to join the two end points - yet. Most of the error is likely to be on the underwater surveys. The present horizontal error is 60m, the vertical 12m. This underwater survey of site 575 has been drawn up without any adjustments.
